

Bencher BS1 is one of the emblematic products manufactured by SEGEDA; it's a light perforator drill with a pneumatic hammer on a 4 meters line. It has a great versatility, given that it is possible to work with the manual as well as with the motorized transferring-system options. It also stands out for its flexibility in perforation works, because it has the possibility of perforating in any direction, both vertical and horizontal.

Possible options at the request of the customer

- Refrigeration system
- Automatic lubricating system
- Assembly of other existent hammers in the market

TECHNICAL SPECIFICATIONS

Height of the tower: 3000 mm

Optimal work pressure: 6,5 bar

Engine power: 3 H.P.

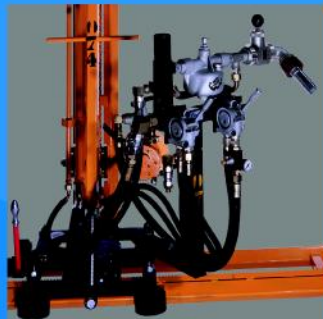

Main Intake of Air: 1 1/2" ϕ

Air Consumption: 7.200 L./min. MS.85

Air Consumption: 8.000 L./min. MS.90

Weight in Kg: 320

Perforation hammer: Segeda MS-85 // MS-90 // MS-100
or any other existing hammer in the market.

Control of the bencher BS.1
